

SAIL POST SAFETY PADS

High Quality Waterproof Protective Safety Pads

Shadeform safety padding is used extensively in kindergartens, child care centres and pre schools as protection against potential injury in the playground where shade posts are located. Safety Pads are manufactured to order to suit your specific requirements, ensuring you get properly fitted padding in a colour of your choice. Quality reinforced vinyl is used with a large range of bright colors available. PVC outer is sewn to a poly backing prior to filling with foam providing a fully enclosed waterproof pad.

Safety pads are secured with a 100mm flap, complete with 50mm velcro. The overlapping flap prevents any gap in padding, ensuring 360 degree protection. Each pad uses our standard 40mm thick open cell foam. Safety pads are available in many different colours (pricing is not affected by colour choice should you want to mix and match).

Standard Sized Safety Pads*

Post pads are available as standard to suit post ranging from 76mm to 165mm outside diameter.

Height Options*

Standard post pads come as 1500mm high (generally suitable for Kindys) or 1800mm high for other applications such as playgrounds and schools.

***Custom Sizes**

Larger sized & Custom pads are available on request - please call for further details & pricing.
